

FALL 2015

Coventry University

Faculty of Engineering and Computing

---

**Module Code 321COM**

**Module Title Rapid Application Development**

---

Instructions to candidates

Answer 4 out of 5 Questions

Time allowed: 3 Hours 00 minutes

For this examination you will be supplied with the following:

---

**IMPORTANT:** You may take this question paper away at the end of the examination. Please keep it in a safe place for future reference.

---

continued...

| Question 1 |  |         |
|------------|--|---------|
| a)         | <p>To reduce security risks, GAE applications run in 'sandboxes' which prevents one application interactive with others. What are the FOUR imposed restrictions.</p> <ul style="list-style-type: none"> <li>• Applicants can't write to the filesystem (must use a datastore)</li> <li>• Applicants can only communicate using ports 80 and 443</li> <li>• Applicants can't take more than a few seconds to respond to requests (can't tie up system resources)</li> <li>• Applicants can't make system calls</li> </ul>   | 8 marks |
| b)         | <p>A POST request with a form input named "contact" and path "/" is sent to your application. Rewrite the following code to response to the POST request and print the content of "contact" on client's browser.</p> <pre>#!/usr/bin/env python  import webapp2  class MainHandler(webapp2.RequestHandler):     def get(self):         self.response.write('Hello world!')  app = webapp2.WSGIApplication([     ('/', MainHandler) ], debug=True)</pre> <p>def post(self):<br/>             content = self.request.get('content')<br/>             self.response.write(content)<br/>             self.redirect('/')</p>  | 9 marks |
| c)         | <p>It is a very common to use callback pattern to handle request from client in GAE webapp. The basic idea is that we hand over the main responsibility for handling something to a framework. Explain the callback pattern in action of GAE web application.</p> <p>The incoming HTTP request arrives to our main program.<br/>         Instead of handling the request directly, we simply set up the framework and tell it under what conditions (urls that match /.*) and where (MainHandler) to call us back when it needs some "assistance" from us.</p> <p>Then the framework starts up and looks at the HTTP request, figuring out which kind of request it is - parsing</p> | 8 marks |

continued...

|  |  |  |
|--|--|--|
|  | all of the data, converting file input if necessary - and then calls out MainHandler - using either the get() or post() method as appropriate. |  |
|--|--|--|

## Question 2

| a)   | <p>Compare and contrast the POST and GET requests in HTTP protocol in terms of their structures, usages, size limit, the ability to cache and the appropriateness to change the server.</p> <table><tr><th>GET</th><th>POST</th></tr><tr><td><ul style="list-style-type: none"><li>Parameters in URL</li><li>Used for fetching documents</li><li>Maximum URL length</li><li>OK to cache</li><li>shouldn't change the server</li></ul></td><td><ul style="list-style-type: none"><li>Parameters in body</li><li>Used for updating data</li><li>No maximum length</li><li>Not OK to cache</li><li>OK to change the server</li></ul></td></tr></table>   | GET      | POST | <ul style="list-style-type: none"><li>Parameters in URL</li><li>Used for fetching documents</li><li>Maximum URL length</li><li>OK to cache</li><li>shouldn't change the server</li></ul> | <ul style="list-style-type: none"><li>Parameters in body</li><li>Used for updating data</li><li>No maximum length</li><li>Not OK to cache</li><li>OK to change the server</li></ul> | 10 marks |
|--|---|----------|------|--|---|----------|
| GET  | POST  |          |      |  |   |          |
| <ul style="list-style-type: none"><li>Parameters in URL</li><li>Used for fetching documents</li><li>Maximum URL length</li><li>OK to cache</li><li>shouldn't change the server</li></ul> | <ul style="list-style-type: none"><li>Parameters in body</li><li>Used for updating data</li><li>No maximum length</li><li>Not OK to cache</li><li>OK to change the server</li></ul>   |          |      |  |   |          |
| b)   | <p>Given that the following JSON code:</p> <pre>//JSON, from http://website.com/data.json {   "items" : [     {       "snippet" {         "title": "Places to visit in Coventy."       }     },     {       "snippet" {         "title": "Hello World"       }     }   ] }</pre> <p>Rewrite the script to download, parse and print every "title" of each items according to the code below.</p> <pre>import urllib2 import json url = http://website.com/data.json  class MainHandler(webapp2.RequestHandler):     def get(self):         getJSON = urllib2.urlopen(url).read()         loadJSON = json.loads(getJSON)          for result in loadJSON['item']:             self.response.write( result["snippet"]["title"])</pre> | 15 marks |      |  |   |          |

| Question 3 |   |         |
|------------|---|---------|
| a)         | <p>Discuss the differences between strong consistency and eventual consistency.<br/>討論強一致性和最終一致性之間的差異。</p> <p><b>Strong</b><br/>data is always consistent, no matter what happens<br/><b>Eventual</b><br/>eventually data is consistent, but there is some time when data is not</p> <p><b>Strong consistency:</b></p> <ol style="list-style-type: none"> <li>1. Makes it very hard to ensure scalability without scarifying</li> <li>2. performance</li> <li>3. We can scale by replicating or sharding on different machines</li> <li>4. Then to ensure strong consistency the write operations will be very slow due to locking</li> <li>5. Join operation will be very slow too</li> </ol> <p>Strong consistency for a single row,<br/>eventual consistency for multi-row levels</p> <p>強一致性：<br/>很難確保可擴展性而不會影響性能<br/>我們可以通過在不同的機器上複製或分片進行擴展<br/>然後為了確保強大的一致性，由於鎖定，寫入操作將非常緩慢<br/>加入操作也會非常慢</p> <p>單行強一致性，<br/>最終的多行級別的一致性</p> | 4 marks |
| b)         | <p>Rational database management system (RDBMS) always maintains a strong consistency. Explain why the strong consistency make RDMS not as good as bigtable in handling very large size data.<br/>Rational數據庫管理系統（RDBMS）始終保持強大的一致性。解釋為什麼強大的一致性使RDMS在處理超大規模數據方面不如bigtable好。</p> <p><b>Bigtable is not a database</b><br/><b>Bigtable does not support queries</b></p>   | 8 marks |

continued...

|    |   |         |
|----|---|---------|
|    | Because Bigtable is a sparse, distributed, persistent multidimensional map  |         |
| c) | <p>Given the following ndb.Model subclass:</p> <pre> from google.appengine.ext import ndb  class Account(ndb.Model):     name = ndb.StringProperty()     userid = ndb.IntegerProperty()     googleid = ndb.UserProperty()     date = ndb.DateProperty()     dob = ndb.DateProperty(auto_now_add= True) </pre> <p>Based on the given class, write a code fragment to create a new Account entry and store it into the datastore.</p> <pre> class create Account(webapp2.RequestHandler):     def post(self):         name = "CHAN Tai Man"         userid = 12345         googleid = users.get_current_user()         date = datetime.date(2000,1,31)         storeAccountInformation = Account(             name = name,             userid = userid,             googleid=googleid,             date=date         )         storeAccountInformation.put()  class showAccount(BaseHandler):     def get(self):         results = Account.query().fetch()         for result in results             self.response.write(result) </pre> | 9 marks |
| d) | <p>ACID is a set of properties that guarantee that database transactions are process reliably. What do the "A", "C", "I" and "D" mean?</p> <p>ACID是一組保證數據庫事務處理可靠的屬性。 "A", "C", "I"和"D"是什麼意思？</p> <ul style="list-style-type: none"> <li>● Atomicity</li> </ul>  | 4 marks |

| Question 4 |   |                               |
|------------|---|-------------------------------|
| a)         | <p>Waterfall model is a traditional methodology used in software development processes.<br/>Why is waterfall model not able to create and respond to change in a turbulent business environment?</p> <p>瀑布模型是軟件開發過程中使用的傳統方法。<br/>為什麼瀑布模型無法在動蕩的商業環境中創建和響應變化？</p> <ol style="list-style-type: none"> <li>1. Difficult to accommodate change after the process is underway</li> <li>2. One phase has to be completed before the next</li> <li>3. Appropriate only for projects with well understood and stable requirements, very large projects</li> </ol> <ol style="list-style-type: none"> <li>1. 這個過程正在進行之後，很難適應變化</li> <li>2. 一個階段必須在下一個階段之前完成</li> <li>3. 只適用於需求清晰，穩定的項目，非常大的項目</li> </ol> <p>什麼樣的項目適合使用這種模式？<br/>What kind of project is suitable to use such model?<br/>agile methodologies.</p> <p>Work is implemented in stages (iterations), and only enough planning is carried out to complete the next iteration<br/>敏捷方法。<br/>工作分階段（迭代）實施，只有足夠的計劃才能完成下一次迭代</p> | 9 marks                       |
| b)         | <p>Name any TWO agile methodologies.<br/>命名任何兩個敏捷方法。</p> <ol style="list-style-type: none"> <li>1. Scrum - [ 混戰 ]</li> <li>2. Crystal Methods - [ 水晶方法 ]</li> <li>3. Lean Development (LD) - [ 精益發展 (LD) ]</li> <li>4. Extreme Programming (XP) - [ 極限編程 (XP) ]</li> <li>5. Feature-Driven Development (FDD)<br/>- [ 功能驅動開發 (FDD) ]</li> <li>6. Adaptive Software Development (ASD)<br/>- [ 自適應軟件開發 (ASD) ]</li> <li>7. Dynamic Systems Development Method (DSDM)<br/>- [ 動態系統開發方法 (DSDM) ]</li> </ol>  | 6 marks                       |
| c)         | <p>Discuss the way to manage the following risk factors in agile methodology:</p> <ol style="list-style-type: none"> <li>1. Schedule slips</li> <li>2. Project cancelled</li> <li>3. Business misunderstood</li> <li>4. Defect rate</li> <li>5. False feature rich</li> </ol>   | <p>2 marks</p> <p>2 marks</p> |

continued...

|  |   |  |
|--|---|--|
|  | <p>Schedule slips - Short release cycles</p> <p>Project cancelled - Smallest release that makes sense</p> <p>Business misunderstood - Make the customer part of the team</p> <p>Defect rate - Testing by programmers and customers</p> <p>False feature rich - Address only the highest priority tasks</p> <p>System goes sour - Maintain a suite of tests</p> <p>Business changes - Short release cycles</p> <p><small>supported by google translate</small></p> <p>討論如何管理敏捷方法中的以下risk因素：</p> <ol style="list-style-type: none"> <li>1. 附表滑倒</li> <li>2. 項目取消</li> <li>3. 業務被誤解了</li> <li>4. 缺陷率</li> <li>5. 功能豐富</li> </ol> <p><small>supported by google translate</small></p> | <p>2 marks</p> <p>2 marks</p> <p>2 marks</p> |
|--|---|--|

| Question 5 |  |         |
|------------|--|---------|
| a)         | <p>Name any 3 typical web application security breaches.</p> <p>命名任何3個典型的Web應用程序安全漏洞。</p> <ol style="list-style-type: none"> <li>1. Validate user input</li> <li>2. Set correct database permissions</li> <li>3. Use stored procedures</li> </ol>  | 6 marks |
| b)         | <p>Provided that the following SQL query:</p> <pre>SELECT * From Account WHERE username = '\$user' AND password = '\$pass'</pre> <p>Assumed that there is no any security implementation in this web application, how would you delete all user accounts based on above SQL statement using SQL injection?</p> <p>假設以下SQL查詢：</p> <p>選擇*從帳戶WHERE用戶名='\$用戶'和密碼='\$傳遞'</p> <p>假設在這個Web應用程序中沒有任何安全實現，那麼如何使用SQL注入基於上述SQL語句刪除所有用戶帳戶？</p> | 8 marks |

continued...

|    |  |         |
|----|--|---------|
|    | <pre>SELECT * From Account WHERE username = " ; DELETE * FROM `Account` WHERE "abc or user==user"/;" AND password = " ;</pre>  |         |
| c) | <p>What is cross-site script (XSS)? And what are the impacts of XSS attack?</p> <p>Cross-site script refer to Attacker sends raw data to a user's browser<br/>This data could come from:</p> <ol style="list-style-type: none"> <li>1. a database</li> <li>2. a form they are filling in</li> <li>3. added directly into the client</li> </ol> <p>Impact XSS attack</p> <ol style="list-style-type: none"> <li>1. steal a user's session</li> <li>2. steal sensitive data</li> <li>3. change the content of a web page</li> <li>4. redirect users to a <u>phishing</u> or malware site</li> <li>5. install a proxy to observe and direct the user</li> </ol> | 7 marks |
| d) | <p>Suggest any two programming approaches, which are able to defend against cross-site scripting.<br/>建議任何兩種編程方法，可以防範跨站腳本。</p> <p>Recommendations:</p> <ol style="list-style-type: none"> <li>1. Eliminate Flaw - [ 消除缺陷 ]</li> <li>2. Defend Against the Flaw - [ 防禦缺陷 ]</li> <li>3. Don't include user supplied input in the output page<br/>- [ 不要在輸出頁面中包含用戶提供的輸入 ]</li> </ol>  | 4 marks |

# Tips

- GAE
  - GAE characteristics advantages (security)
  - run sandbox benefit
  - limit port
  - execution timeout
  - can not read local file
  - can not run system call
  - GAE coding
- GAE Coding
  - understand project structure (file? / python class?)
  - handler (coding)
  - configuration file
- Datastore
  - rdbms vs datastore?
    - consistency (strong? Eventual?)
    - coding create ndb mode insert,query
- Web API
  - POST vs GET
  - json vs xml (markup format)
  - coding -urllib2 download, read json into dictionary / array
- PM (Scrum / Agile)
  - definition, waterfall vs scrum
  - advantages of scrum -pm
    - (i.e., how to manage risk: schedule slip / project cancelled?)
  - user story - how to write? (template), story validation?
  - conditions of satisfaction > acceptance test
  - scrum vs extreme programming ( or other methodology)
- Security
  - Inject / XSS
  - How injection works with example? what harmful thing can injection do? (about SQL)
  - How does XSS work with example? what harmful thing can XSS do? (about fake website)
